#### **SECTION 1**

#### INTRODUCTION

This Operations and Maintenance (O&M) Manual has been created as a guide for monitoring and maintaining the performance of the pilot-scale bioventing blower system and vent well plumbing at Building 8200, Fort Carson, Colorado

Bioventing is the forced injection of fresh air, or withdrawal of soil gas, to enhance the supply of oxygen in subsurface soils for *in situ* bioremediation. A blower system is used to inject air into the soil, thereby supplying fresh atmospheric air (with approximately 20.8 percent oxygen) to contaminated soils. Once oxygen is provided to the subsurface, existing soil bacteria aerobically break down fuel residuals. Aerobic biodegradation is much more efficient than anaerobic biodegradation which occurs in oxygen depleted soils.

Parsons Engineering Science, Inc. (Parsons ES) has installed one air injection bioventing system at Fort Carson. The system at Building 8200 consists of an air injection blower, blower shed, two vent wells (VWs), seven soil gas monitoring points (MPs), and associated piping at the site. The blower was started on August 5, 1996 and the injection rates were optimized at each vent well to assure adequate aeration of contaminated soils to promote aerobic biodegradation.

Fort Carson Directorate of Environmental Compliance and Management (DECAM) personnel located at Fort Carson are responsible for routine monitoring of the bioventing system. If significant problems are encountered with the operation of this system, Parsons ES should be notified so repairs can be made. Under the Extended Bioventing Project Option 1, Parsons ES is responsible for system repair for a 1-year period after system startup (i.e., until August 1997). Should the bioventing system cease to operate or develop significant problems, please call the Parsons ES Site Manager, Mr. Dave Teets, at (303) 831-8100.

#### **SECTION 2**

#### SYSTEM DESCRIPTION

#### 2.1 BLOWER SYSTEMS

A Gast® R5 blower powered by a 2-horsepower direct-drive motor was installed at Building 8200. The R5 blower is rated as having a flow rate of 110 standard cubic feet per minute (scfm) at a pressure of 40 inches of water. The actual performance of this blower will vary with changing site conditions. As installed, the blower was producing an estimated average flow rate of 13.5 actual cubic feet per minute (acfm) into each of two injection VWs at a pressure of 24 inches of water. The blower system includes an inlet air filter to remove any particulates which are entrained in the inlet air stream and several valves and monitoring gauges which are described in Section 2.2. Schematics of the pilot-scale blower system installed at the site is provided in Appendix A. Corresponding blower performance curves and relevant service information are provided in Appendix B.

#### 2.2 MONITORING AND FLOW CONTROL EQUIPMENT

#### 2.2.1 Monitoring Gauges

The bioventing system is equipped with vacuum, pressure, and temperature gauges, and air velocity measurement ports. Gauges have been installed on the air injection system at the following locations: a vacuum gauge in the inlet piping and pressure and temperature gauges in the outlet piping.

#### 2.2.2 Flow Control Equipment

Manual and automatic pressure relief valves (PRVs) and flow control valves (FCVs) have been installed on the bioventing blower system. A Manual PRV, or bleed valve, has been installed in the outlet piping, immediately following the blower. The bleed valve controls the total system pressure and air flow out of the blower by releasing excess air flow to the atmosphere. An automatic PRV installed immediately following the manual PRV are used to protect the blower system from burning out if pressures rise due to pipe blockage. The automatic PRV is set to bleed off flow at a preset pressure and thus prevent blower outlet pressure from ever exceeding the rated pressure. Manual FCVs have been installed in the piping leading to each VW to enable the flow rate to each VW to be adjusted individually. The FCVs and bleed valves have been set by Parsons ES personnel to deliver a calculated amount of air to each VW and should not be adjusted unless directed to do so by Parsons ES personnel.

The blower system has also been equipped with flow measurement ports. These ports consist of brass bushings installed in the outlet piping leading to each VW. These bushings,

which should be plugged during system operation, allow the insertion of a thermal anemometer for the measurement of air velocity. These ports are used by Parsons ES personnel to measure and control the flow of air into each individual vent well.

#### **SECTION 3**

#### SYSTEM MAINTENANCE

Although the blower system installed at Building 8200 is relatively maintenance free, periodic system maintenance is required for proper operation and long life. Recommended maintenance procedures and schedule are described in detail in the instruction manuals included in Appendix B and briefly summarized in this section.

Filter inspection must be performed with the systems turned off. Do not change the flow control valve settings (valves have been pre-set for a specific flow rate) before re-starting the blower.

#### 3.1 BLOWERS/MOTORS

The blower and motor for the blower system is relatively maintenance free and should not require any maintenance during the operational period. Both the blower and motor have sealed bearings and do not require lubrication.

#### 3.2 AIR FILTERS

To avoid damage caused by passing solids through the blowers, an air filter has been installed in-line before the blower. The paper filter elements contained within the filter assembly is accompanied by polyurethane foam prefilters. The filters should be checked weekly for the first 2 months of operation. A facility employee should determine the best schedule for filter replacement based on the first 2 months of system monitoring. The polyurethane prefilters can be washed with lukewarm water and a mild detergent. Paper filter elements should never be washed, and should be disposed of and replaced as necessary. When the pressure or vacuum drop across the filter is 15 inches of water or greater, a dirty filter element should be suspected, and cleaning or replacement should be performed. Typical filter element replacement intervals range from 3 to 6 months.

To remove a filter, turn the system off by pushing the stop button on the starter, loosen the wing nut on the filter top, lift the metal top off the air filter, and lift the air filter element from the metal housing. Remove the polyurethane prefilter (if applicable) and wash before replacing.

The filter element is manufactured by Solberg Manufacturing, Inc. in Itasca, Illinois. Their telephone number is (708) 773-1363. Additional filters can also be obtained through Parsons ES. The Parsons ES contacts are Mr. Dave Teets and Ms. Jenny Hartfelder at (303) 831-8100. The part number for the replacement filter element is 30P. Spare air filter elements have been placed inside the blower enclosure.

#### 3.3 MAINTENANCE SCHEDULE

The following maintenance schedule is recommended for the blower system. During the initial few months of operation more frequent monitoring is recommended to ensure that any startup problems are quickly corrected. A daily drive-by inspection is recommended during the initial 2 weeks of operation to ensure that the blower system is still operating with no unusual sounds. Thereafter monitoring inspections every 2 weeks are recommended (see Section 4). Preprinted data collection sheets for recording maintenance activities are provided in Appendix C.

Maintenance Item

Maintenance Frequency

Filter

Check once every 2 weeks, wash or replace as necessary (see Section 3.3). Inlet vacuum exceeding 15 inches of water indicates that the filter requires cleaning or replacement.

#### 3.4 MAJOR REPAIRS

Blower systems are very reliable when properly maintained. Occasionally, however, a motor or blower will develop a serious problem. If a blower system fails to start, and a qualified electrician verifies that power is available at the blower or starter, Parsons ES should be contacted to arrange for repairs. The Parsons ES contacts are Mr. Dave Teets and Ms. Jenny Hartfelder at (303) 831-8100. Parsons ES is responsible for major repairs during the first year of operation.

#### **SECTION 4**

#### SYSTEM MONITORING

#### 4.1 BLOWER PERFORMANCE MONITORING

To monitor blower performance, the vacuum, pressure, and temperature should be measured for the blower system. All vacuum and pressure readings can be read directly from the gauges (in inches of water) and temperature measured and recorded in degrees Fahrenheit (°F). These data should be recorded every 2 weeks on a data collection sheet (provided in Appendix C). All measurements should be taken at the same time while the system is running. Because the system is noisy, hearing protection should be worn at all times when working near the operating blower.

#### 4.2 MONITORING SCHEDULE

The following monitoring schedule is recommended for this system. During the initial month of operation, more frequent monitoring is recommended to ensure that any start up problems are quickly corrected. Data collection sheets have been provided to assist your data collection and are included in Appendix C.

Monitoring Item Monitoring Frequency

Vacuum/Pressure Daily during first week, then once every 2 weeks.

Temperature Daily during first week, then once every 2 weeks.

Power Usage As required.

#### 4.3 REPORTING MONITORING RESULTS

System monitoring data sheets should be faxed to the Parsons ES Site Manager, Mr. Dave Teets at (303) 831-8100, once every 2 months. However, if a significant change in the system temperature or pressure is noted (such as a significant drop or increase in pressure) please call Mr. Teets immediately. A significant change in system temperature or pressure may be indicative of a problem with the air delivery system or blower.

#### **OPERATING AND MAINTENANCE INSTRUCTIONS**

#### SAFETY

This is the safety alert symbol. When you see this symbol ersonal injury is possible. The degree of injury is shown by the following signal words:

DANGER Severe injury or death will occur if hazard is mored.

VARNING Severe injury or death can occur if hazard is ignored.

AUTION Minor injury or property damage can occur if azard is ignored.

Review the following information carefully before opering.

#### GENERAL INFORMATION

This instruction applies to the following models ONLY: 3105N-50, R4110N-50, R4310P-50, R4P115N-50, R5125Q-50, R5325R-50, R6130Q-50, R6P155Q-50, R6350R-50, R6P355R-50 and R7100R-50. These blowers he intended for use in Soil Vapor Extraction Systems. They are powered with a U.L. listed electric motor Class Div. 1 Group D motors for Hazardous Duty locations. The model of the motor of the motor operation operation, contact the factory.

Last Manufacturing Corporation may offer general application guidance: however, suitability of the particular power and/or accessories is ultimately the responsibility of the user, not the manufacturer of the blower.

#### INSTALLATION

ANGER Models R5325R-50, R6130Q-50, R6350R-50, 125Q-50, R6P155Q-50, R6P355R-50 AND R7100R-50 use Pilot Duty Thermal Overload Protection. Connective this protection to the proper control circuitry is inducted by UL674 and NEC501. Failure to do so could may result in a EXPLOSION. See pages 3 and 4 for recommended wiring schematic for these models.

MARNING Electric shock can result from bad wiring: A qualified person must install all wiring, conforming to a required safety codes. Grounding is necessary.

WARNING This blower is intended for use on soil vapor extraction equipment. Any other use must be approved in thing by Gast Manufacturing. Corp. Install this blower in any mounting position. Do not block the flow of cooling air over the blower and motor.

Pumbing - Use the threaded pipe ports for connection of y. They will not support the plumbing. Be sure to use the same or larger size pipe to prevent air flow restriction and overheating of the blower. When installing fittings, be sure to use pipe thread sealant. This protects the threads in the blower housing and prevents leakage. Dirt and chips are often found in new plumbing. Do not allow the m to enter the blower.

NOISE - Mount the unit on a solid surface that will no increase the sound. This will reduce noise and vibration We suggest the use of shock mounts or vibration isolation material for mounting.

ROTATION - The Gast Regenair Blower should only rotate clockwise as viewed from the electric motor side. The casting has an arrow showing the correct direction. Confirm the proper rotation by checking air flow at the IN and OUT ports. If needed reverse rotation of three phase motors by changing the position of any two of the power line wires.

#### **OPERATION**

MARNING Solid or liquid material exiting the blower or piping can cause eye damage or skin cuts. Keep away from air stream.

► WARNING - Gast Manufacturing Corporation will not knowingly specify, design or build any blower for installation in a hazardous, combustible or explosive location without a motor conforming to the proper NEMA or U. L. standards. Blowers with standard TEFC motors should never be utilized for soil vapor extraction applications or where local state and/or Federal codes specify the use of explosion-proof motors (as defined by the National Electric Code, Articles 100,500 c1990).

CAUTION Attach blower to solid surface before starting to prevent injury or damage from unit movement. Air
containing solid particles or liquid must pass through a
filter before entering the blower. Blowers must have
filters, other accessories and all piping attached before
starting. Any foreign material passing through the blower
may cause internal damage to the blower.

Air temperature increases when passing through the blower. When run at duties above 50 in. H<sub>2</sub>O metal pipe may be required for hot exhaust air. The blower must not be operated above the limits for continuous duty. Only models R3105N-50, R4110N-50 and R4310P-50 can be operated continuously with no air flowing through the blower. Other units can only be run at the rating shown on the model number label. Do not Close off inlet (for vacuum) to reduce extra air flow. This will cause added heat and motor load. Blower exhaust air in excess of 230°F indicates operation in excess of rating which can cause the blower to fail.

ACCESSORIES ... Gast pressure gauge AJ496 and vacuum gauges AJ497 or AE134 show blower duty. The Gast pressure/vacuum relief valve, AG258, will limit the operating duty by admitting or relieving air. It also allows full flow through the blower when the relief valve closes,

#### SERVICING

WARNING To retain their sealed construction they should be serviced by Gast authorized service centers ONLY. These models are sealed at the factory for very low leakage.

WARNING Turn off electric power before removing blower from service. Be sure rotating parts have stopped. Electric shock or severe cuts can result. Inlet and exhaust filters attached to the blower may need cleaning or replacement of the elements. Failure to do so will result in more pressure drop, reduced air flow and hotter opera-

tion of the blower. The outside of the unit requires cleaning of dust and dirt. The inside of the blower also may need cleaning to remove foreign material coating the impeller and housing. This should be done at a Gast Authorized Service Center. This buildup can cause vibration, failure of the motor to operate or reduced flow.

KEEP THIS INFORMATION WITH THIS BLOWER. REFER TO IT FOR SAFE INSTALLATION, OPERATION OR SERVICE.

# Free software identifies best Gast blowers for soil and groundwater remediation

Now you can size and select regenerative blowers and accessories for soil and groundwater remediation systems faster, easier and more accurately than ever before. Gast remediation system engineering software does the job and it is yours for the asking. The 3-1/2-inch IBM-compatible disk calculates performance when the blower is operating with both a vacuum and pressure load at the same time. The programs will also compensate for changes in performance from altitude and temperature. helping you identify the optimum Gast blowers for your application.

Call 1-800-952-4278 to receive your free remediation system engineering software.

#### Relief Valve

By setting a relief valve at a given pressure/vacuum, you can ensure excessive duties will not harm the blower or products in your application.

AG258 Relief valve	1½-inch NPT adjustable 30-200 inches H2O, vacuum or pressure, 200 CFM max
AG258F Relief valve	2½-inch NPT adjustable 30-200 inches H2O, yacuum or pressure, 550 CFM max

#### Warranty

REGARDLESS OF CAUSE, if a product you buy from this brochure does not work right, Gast will repair or replace it once, at no charge, for up to one year from the date of shipment from the factory. In the course of repair or replacement, Gast may send you written recommendations on how to prevent a problem from happening again. Gast reserves the right to withdraw this warranty if you do not follow these recommendations. Customer is responsible for freight charges both to and from Gast in all cases. This warranty does not apply to electric motors, electrical controls, and gasoline engines, which Gast obtains from other manufacturers. A motor or engine carries only the warranty of the company that makes it.

THIS WARRANTY IS EXCLUSIVE AND IS IN LIEU OF ALL OTHER WARRANTIES, WHETHER WRITTEN, ORAL OR IMPLIED, INCLUDING THE WARRANTY OF MERCHANTABILITY AND OF FITNESS FOR ANY PARTICULAR PURPOSE. GAST'S LIABILITY IS IN ALL CASES LIMITED TO THE REPLACEMENT PRICE OF ITS PRODUCT. GAST SHALL NOT BE LIABLE FOR ANY OTHER DAMAGES, WHETHER CONSEQUENTIAL, INDIRECT, OR INCIDENTAL, ARISING FROM THE SALE OR USE OF ITS PRODUCTS.

Gast's sales personnel may modify this warranty, but only by signing a specific, written description of any modifications.

#### DISCLAIMER

The information presented in this catalog is based on technical data and test results of nominal units. It is believed to be accurate and is offered as an aid in the selection of Gast products. It is the user's responsibility to determine suitability of the product for his intended use and the user assumes all risk and liability whatsoever in connection therewith.
